Before you start, review all relevant files in my CLAUDE COWORK folder.

Use the AskUserQuestion tool to clarify: audience, tone, format, and any missing details.

Refine the plan with me before execution.

Example Prompt:

I want you to create a complete job application package for me as a fresher in Computer Science, including:

1. A personalized cover letter tailored to my skills in [XYZ skills] and my profile.
2. A polished resume highlighting my education, projects, and achievements.
3. Suggested LinkedIn/Email DM messages for recruiters that are concise and professional.

So that it is ready to use, highly professional, optimized to make recruiters respond, reflects my personal style, and clearly demonstrates my skills and potential as a candidate.

Before starting, review all relevant files in my CLAUDE COWORK folder.

Use the AskUserQuestion tool to clarify details about my target

et companies, preferred job roles, tone, and any specific achievements to emphasize.

Refine the plan with me before execution.

Pro Tips for Task & Success Criteria — Job Application Example

1. **TASK:** Be action-oriented and multi-step. Use verbs like *create, draft, optimize, tailor, highlight*.
 - **Weak:** "Help me apply to jobs."
 - **Strong:** "Create a complete job application package including a personalized cover letter, polished resume, and recruiter outreach messages."
2. **SUCCESS CRITERIA / OUTCOME:** Specify the **goal, audience, format, or impact**.
 - **Weak:** "So it looks good."
 - **Strong:** "So it is ready to send to recruiters, clearly showcases my Computer Science skills and projects, matches my personal style, and increases the chances of getting a response."
3. **Optional extra:** Add **context about target companies, roles, or timeframe**.
 - **Example:** "Tailor the application for software engineering roles at tech startups, with a 1-page resume and a concise cover letter under 300 words."
